

Culinary Squares® -- Affordable Upgrade to Replace Foam

What does your takeout packaging say about your food? Replace the foam clamshells and other polystyrene products with high performance, polypropylene Culinary Squares® bases and lids. The black bases and clear dome lids keep your food looking fresh and appealing while avoiding order errors with visibility of food being served. A more sustainable option than foam, Culinary Squares packages are dishwasher safe, reusable, and recyclable. Bases are made with a natural mineral filled additive using 40% less petroleum based resin.

Features include:

- Separate 8.5" bases and lids in high heat polypropylene
- Withstands temperatures to 230°F under heat lamps or in the microwave
- Clear, anti-fog, vented lids keep food visible reducing errors
- Leak-resistant closure eliminates messy spills
- Durable, cut-resistant base provides a table-ready presentation
- 1 or 3 Compartment options with interchangeable lids
- Available individually or combo packed bases and lids

Embraceable® Platter -- Eliminate Lids and Reduce Costs

Embraceable® 11" x 8" black, oval polypropylene platter is designed and patented with a locator ring in the bottom to hold a standard 8 ounce squat paper food container. This popular serving size is used for chili, soups, oatmeal, grits, mac & cheese, and many other items that often accompany a main dish, sandwich, or salad. The clear, anti-fog, vented PP dome lid contains an integral sealing flange that forms a lid over the paper container at the same time that it forms a leak-resistant seal on the platter. This eliminates the lid for the paper container, which saves expense and reduces the amount of packaging consumed, thereby reducing carbon footprint. It also improves consumer convenience, as the meal may be carried in one single container, rather than two.

Both base and dome work well for hot foods held under heat lamps, chilled ready-to-heat meals in the microwave, and for assorted cold food applications, thus reducing SKUs. The strong and durable, cut-resistant black PP bases withstand temperatures up to 230°F. Bases are made with natural mineral additives reducing the use of petroleum based resin by 40% joining other products in Anchor's Nature's Best® line of sustainable products. Elimination of the extra lid for the paper container also demonstrates your environmental commitment to reduce waste.

Company Information

For over 50 years, Anchor Packaging has supplied the industry with innovative solutions for consumer package solutions. We continue to expand our knowledge, designs and operational base to create and deliver the answers to tomorrow's packaging challenges. Anchor devotes the resources to bring a stream of new and improved, value-added products and services to market. With our optimized 7-step product development process, we can get your product to market in record time. Our turnkey solutions include full product design services, modeling, rapid prototyping, and in-house tool design, to take you from concept to production quickly and economically.

If your business can benefit from unique packaging that delivers the features and benefits required for your specific product, then Anchor should be your preferred packaging partner.
